Facilities electricity: Series to commit to using 100% renewable electricity by 2026 at the latest, and create a transition road map for how this will be achieved (at facilities away from track).

Event vehicles: Series to create and implement a plan to minimize the use of fossil fuel powered vehicles through a reduction in kilometres driven at events and switching to lower/zero carbon options (e.g. e-vehicles).

Scooters: Series to minimize the use of fossil fuel powered scooters, if any, across paddock transportation, either through replacement with e-scooters, or reduction in use of traditional scooters.

Generator use: Series to create a road map for full replacement of all ICE generators with lower/zero carbon alternatives by 2026 at the latest.

Series to eradicate use of space heaters if currently used.

Lower carbon diets: Series to offer at least one vegetarian and one vegan meal option to guests within the series' hospitality sites.

Logistics: Series to transition all logistics trucks to be at least Euro6 standard to limit carbon and air quality impacts from logistics.

Employee travel: Series to introduce employee travel carbon reduction plans, which should include:

- Limiting/ reducing the number of employees taken to each race where possible;

Chemicals: Series to work with circuits to ensure all chemicals used are safely discharged in the appropriate manners.

7.3 WASTE

Waste management and recycling: Series to ensure all waste created is correctly separated and fed into circuits existing recycling infrastructure;

Series to ensure all participating teams follow waste management and recycling practices;

Single use plastic: Series to eliminate the use of single use plastic across their paddock by switching to reusable alternatives for all existing single-use plastic;

Series to communicate that they are single-use plastic free through communication channels;

Food waste: Series to correctly separate all food waste and other compostable materials generated, and work with circuits to ensure it can be centrally collected for composting or similar (dependent on circuits infrastructure).
